The use of the Almanack

In the use of this Almanack the Dominical-letter must be alwayes known. Ther for this adjoyning Table will informe you what it is for twenty years

The use

First find a Dominical Letter by the table and that will serue for the whole year proposed

Example

In the year 1678 ye first Thursday in Iune I would know what day of the month it is. And doe find by the Table the Dominical letter to be F. which will be ye second day, and first Sunday of the month, and Thursday will be the 6 day

A plain & ready Table to finde Easter-day for ever, by the Golden Number, & Sunday Letter.

Take this for a General-rule, $\frac{t}{y}$

The same day 7 weeks { before / after } Easter is { Shrovesunday / Whitsunday }

A fortnight before { Shrovesunday / Whitsunday } is { Septuagesima / Rogation sunday }

And 5^{e} sunday after { Shrovesunday / Whitsunday } is { Quadragesima / Trinity sunday }

Also whensoever the Golden Number is 3, 6, 9, 12, 15 or 18 Then the Epact is the same But

The Golden Numb	1	2	4	5	7	8	10	11	13	14	16	17	19
Then the Epact is	11	22	19	25	17	28	20	1	23	4	20	7	29

A Tide Table (by knowing the Moons age) to finde the time of high-water at those Places following.

Night is the Cloak to cover Sin, and the
armour of the wrongest man —
a Wicked Man is the Devils Slave
there is no greater infamy, than to be
Wicked in promise and Black in
performance —

the end of the Commandments, & then the end of

foolish love repentance

No Day cometh to man, wherein he doth not

some cause of Sorrow —

Day is the Image of life, Night of Death

He that sees breathes the air, sleeps

after slept and Wakes before night

Iuly. Iune. Augu. Septemb. Octob. Nov. Dec.

Note that a ſtands for quater of a part, b for half a part, and c for three quarters.

To find the hour of the day by this Table.

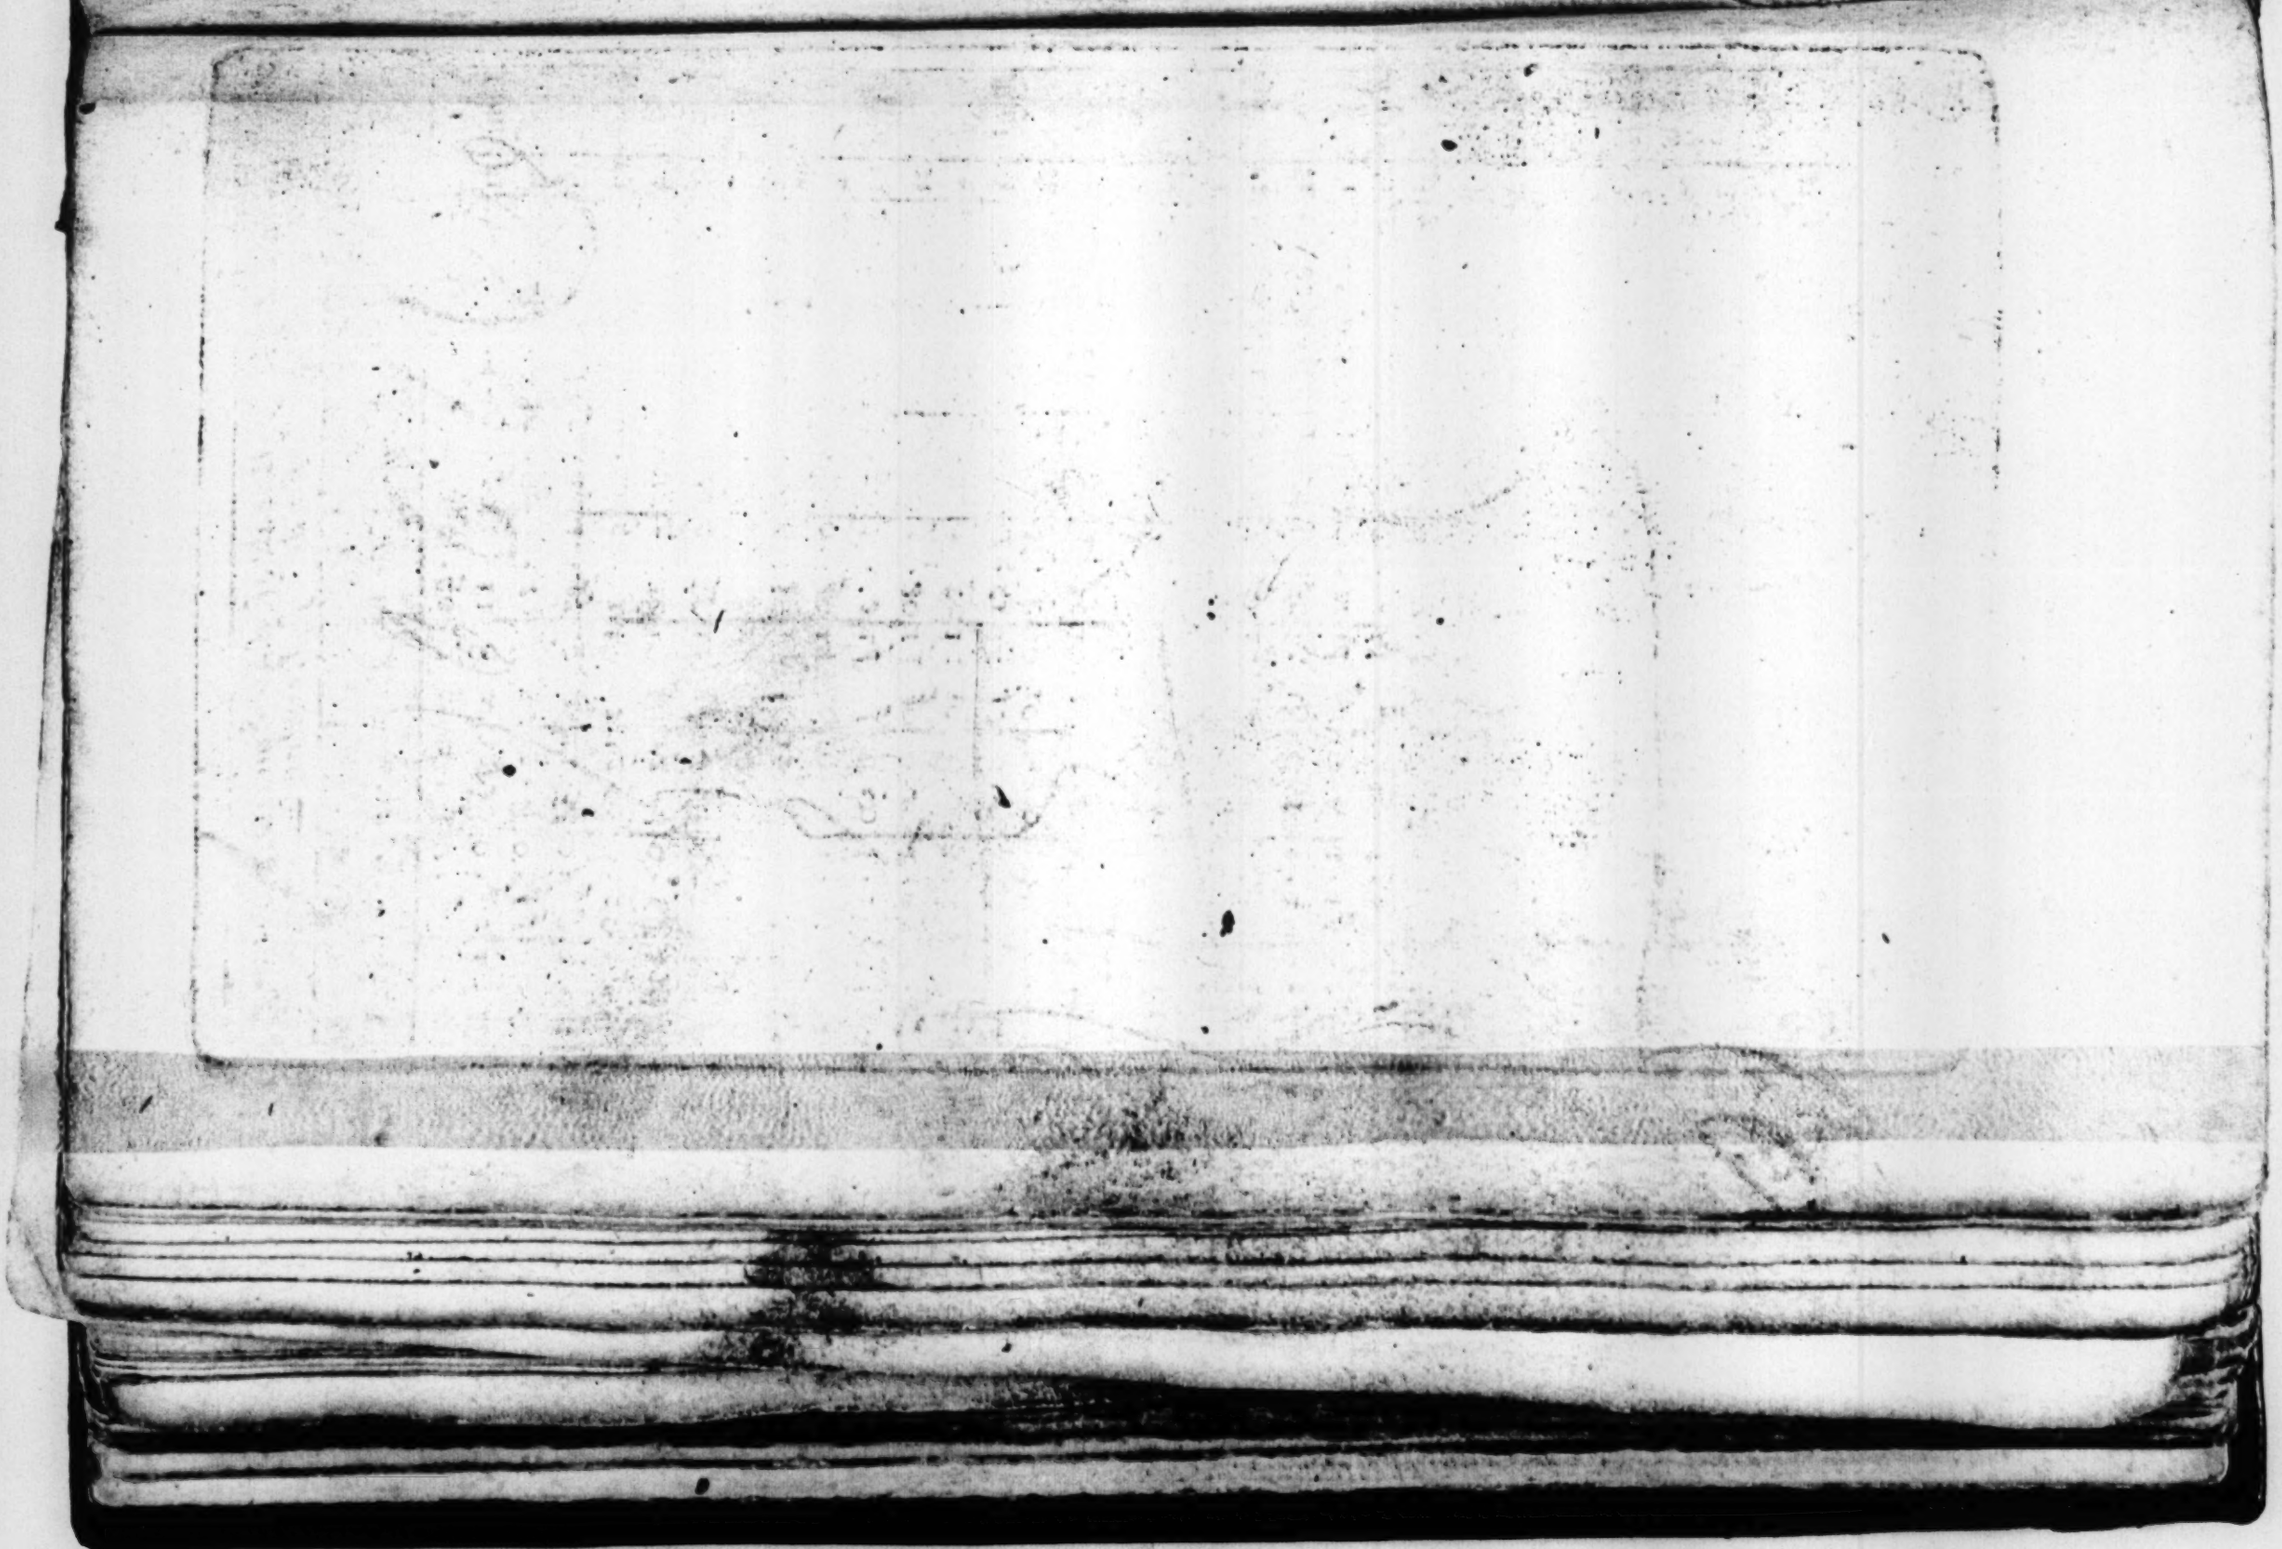

Take a *Staff* of what length you pleaſe, and (with a *Pair of Compaſſes*) divide it into 10 equal parts, marking them upon the *Staff*; then in ſome plain level place, where the *Sun* doth ſhine, ſet it upright, and mark where the end of the ſhadow thereof falls, which done, meaſure with your *Staff*, the length of the ſhadow and note the parts it contains, which find out in this *Table*, againſt the day of the *Month*, and over head, you have the *true hour* of the *day*.

Suppoſe the 9 of *April* or 13 of *Auguſt*, I ſhould find the ſhadow of the Staff to be 30 partes and a quarter (that is three Staff length and a quater) therefore ſeeking in the *Table* againſt the ſaid dayes I ſee over-head, that it is then either 7 a clock in the morning, or 5 in the afternoon ſo that if your obſervation was in the morning it was 7 but if in the after noon. 5 a clock:

By this Example, *you may ſee the eaſe, and excellent uſe of the* Table *which is as ready as any movable* Sun-Dyal; *ſo that whereſoever you are, or travell, you may (having this* Book *about you) ſpeedily know the true hour, &c.*

A Perpetual Table of Break of day, Sun rise, planetary hour, etc. in the Latitude of London

A Table of y^e number of bricks in a rodd of Walling at any Feet high From 1 to 20 for 1 and a ½

Feet high	at 1 brick thick	at 1 & ½ brick thick	The Vse of y^e Table
1	176	264	If you would have this
2	352	528	Table for ½ a brick, take
3	528	792	the half of y^e table for
4	704	1056	one brick if for 2 brick
5	880	1320	then double it. if for 2
6	1136	1704	and a ½ then ad both
7	1232	1848	these together; if
8	1408	2112	for three double
9	1584	2376	that for one
10	1760	2640	brick and ½
11	1936	2904	If you have any numbe
12	2112	3168	of feet of brick work, at
13	2288	3432	half a brick, 1 brick, or
14	2464	3696	2 bricks, or more, and you
15	2640	3960	would reduce it to one
16	2816	4224	brick and a half: then say
16½	2904	4356	by the line of numbers as
17	2992	4488	1. 2. 4. 5 or 6 is to three,
18	3168	4752	so is the number of feet
19	3344	5010	at ½ 1. 2. 2½ or 3 bricks to y^e
20	3520	5280	number of feet at 1 and ½.
